

Changelog

1.8.0 - 2019-10-9

Added

- Hide option for the folder browser in the documents listing.
- Document link buttons now generate the documents location to the clipboard.
- Added support for ai word indexes.
- Support for pidless documents.

Changed

- The document list no longer prints the folder name if the list is in "all documents" mode.
- Fixed some invalid translations.
- If configured the pid selector is not visible on new documents. The selector remains in old documents.

Removed

- Invalid log output.
- Invalid characters in the document link output.

1.7.0 - 2019-9-4

Added

- General form builder.
- Metadata -AI and requests to such AI.
- De-anonymize code to process the response data from the `/test` routes.
- Support for sending the ai teaching from remove miner instances.
- Support for custom translations.
- Ability to export the custom translations.
- Support for ldap groups for the internal miner roles.
- Support for new *TensonFlow* based AI implementations.
- Ability to load custom context help text files.
- Extended search
- Ability to save the "owner" of a folder. New documents in said folder will be assigned to said person.
- Ability to change the font of the document text via the key: `gdpr.ui.document.font`. Uses CSS `font-family` parameter.

Changed

- Updated the ui to use a new Vue 2.6.10 version.
- Updated Elinar-Ner to version 1.8.24.
- Show folder tree in the *delete*, *mask* and *move* listing.
- Made the main app link bar only show valid links.
- Fixed issues with the system wipe to not finishing ever.
- Fixed issues with the system wipe UI portion now showing the status.
- Disabled the document upload button for all other users except sys. admin by default.

- Fixed the Refresh button not working on certain situations

Removed

- Removed the requirement for the simple `isGdpr` AI request.
